In the article titled “Health-Related Quality of Life and Sleep Quality after 12 Months of Treatment in Nonsevere Obstructive Sleep Apnea: A Randomized Clinical Trial with Continuous Positive Airway Pressure and Mandibular Advancement Splints” [1], the authors identified an error in Section 2.4 as follows:

“Hypopnea events were defined as $\geq 50\%$ reduction in respiratory flow lasting ≥ 10 s, with a simultaneous $\geq 3\%$ reduction in peripheral blood oxygen saturation from baseline” should be corrected to “Hypopnea events were defined as $\geq 30\%$ reduction in respiratory flow lasting ≥ 10 s,

with a simultaneous $\geq 3\%$ reduction in peripheral blood oxygen saturation from baseline.”
